

Scrooge is a decentralized cryptocurrency. The most user-friendly wallet app to use for people unfamiliar or new to decentralized trading is Trust Wallet, available on App and Play store. Steps to view your Scrooge tokens: Scroll below assets and click manage crypto. Click the + sign in the top right corner. Add the Scrooge contract (Make sure it is on the Binance Smart Chain) 0x9DfeE72aEa65dc7e375d50Ea2Bd90384313A165A Click import. Your Scrooge, when redemption is approved, will now be visible to you.

## What is Scrooge crypto?

Scrooge is a reflection token that uses volume from the casino to purchase the crypto token (Because this is the primary redemption), rewarding users who hold the coin USDT which is essentially a crypto US dollar, because the token is a taxed reflection token. What this means is as the social casino grows if you continue to hold SCROOGE instead of selling it is possible for you to get reflections from the token itself as it is bought/sold by others. (Please note that in no way does SCROOGE promise profits by holding the token) Please do your own research to determine if you see value in the token or not.

Scrooge holders also get an allowance of free monthly casino sweep tokens. Right now, it is up to 3000 tokens monthly for free just for holding SCROOGE! The amount you can claim is solely determined by the amount of SCROOGE you hold.

| Looking to swap your Scrooge win into USD?   |
|--|
| You will need a small amount of bnb smart chain coin to cover the network fees for the blockchain transaction. |
| Open your trust wallet browser.  |
| Head to pancakeswap.finance.   |
| Scroll down below the bunny and click "Trade Now".   |
| Confirm your wallet is connected, if it is not, connect it now.  |
| On the top coin option drop-down, type Scrooge and select the option that does not say "Old".                  |
| On the bottom coin, select BNB.  |

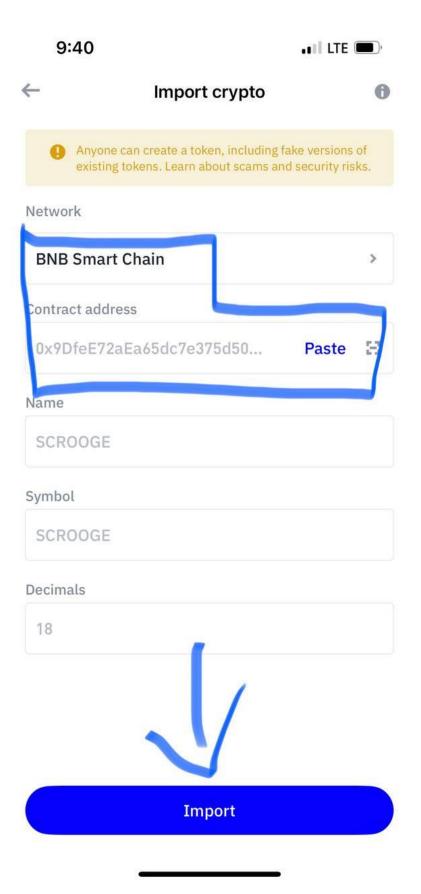

On slippage tolerance, click the pencil and type 18 (not 0.18) on the far-right box.

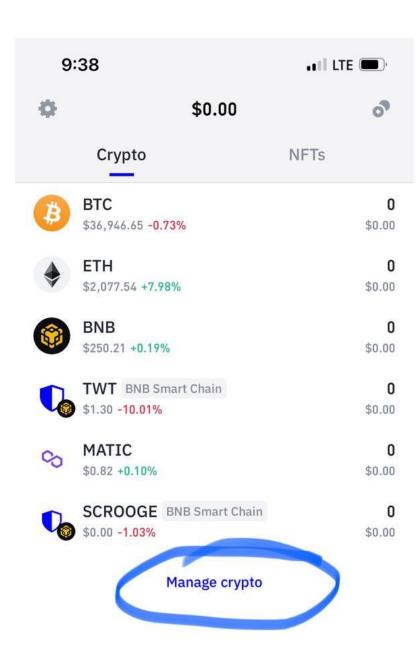

Click swap and approve the prompts (enable, approve, continue anyways, confirm etc.)

Once completed the BNB will be added to your wallet.

To move the bnb to USD, you can use a couple options, directly send it to your crypto exchange like Crypto.com, binance or others that accept BNB directly (Coinbase does not).

If you do not use a centralized exchange, you can swap the BNB in your trust wallet from the black smart chain version into the yellow beacon chain version, and swap that into a coin that your exchange or application accepts, this typically is Bitcoin. Which you can directly send to Cashapp or PayPal as well as coinbase etc.... This swap from bnb to Bitcoin does have a waiting period to process and return to your trust wallet.
